

Genetic load per deleterious SNP site by sorghum race

Each panel = one race | Features ordered high → low within each race | Diamond = mean | Shared y-axis | SAP panel (n = 400)

load per site = load_raw ÷ n_deleterious_SNP_sites_in_feature | Top 5% ZSS (< -5.15) | Denominators: exon 8,157 · intron 4,795 · upstream 8,782 · downstream 5,174 · intergenic 300,507 sites
